MEDICATION MONITORING

URINE DRUG TESTING (UDT) IS GAINING ACCEPTANCE IN THE CLINICAL PRACTICES OF MUSCULOSKELETAL SURGEONS AND OTHER TYPES OF PHYSICIANS BECAUSE IT HAS FOUR CLEAR BENEFITS TO THE PHYSICIAN:

- ✦ It provides immediate additional information about the patient that might not have been shared with the physician, thereby allowing the physician to practice better medicine when generally treating the patient.
- ✦ UDT in the office also mitigates the risk of an adverse reaction due to the interaction of a prescribed medication and an unmentioned drug in the patient's system.
- ✦ UDT assists in keeping patients compliant with the pain medications being prescribed because there are times when the physician will want the patient to test positive to demonstrate compliance.
- ✦ UDT reduces physician liability and is reimbursable by most major carriers.
